SUMMARY

Driven Computer Science student with a strong foundation in algorithm design, artificial intelligence, and software development. Experienced in building complex multi-agent systems, neural networks, and developing secure AI-powered tools. Bilingual in Italian and Romanian, looking to leverage my technical skills and problem-solving mindset in a dynamic software engineering role.

EXTRACURRICULAR ACTIVITIES

Hackathon: Public Sector Digitalization Solutions

Feb - Apr 2026

- Engaged in an intensive 3-month program solving real-world public sector challenges alongside IT mentors and government representatives. Developed a concrete, functional digital solution tailored to actual administrative needs.

Exploring AI Agents in Practice (Workshop) | Hosted by MHP – A Porsche Company

Nov 2025

- Developed an AI-powered application designed to automatically scan source code, detect exposed private keys, and trigger security alerts.

Cloudflight Coding Contest – CCC (41st Edition)

Nov 2025

- Competed against thousands of developers worldwide in a rigorous, level-based programming marathon. Developed efficient algorithms to clear multiple stages within a four-hour timeframe.

PROJECTS

PROJECTS AI-Powered GitHub Secret Scanner - Multi-Agent System & MCP

Developed an intelligent DevSecOps tool during the MHP "Master the Stack" workshop that automatically detects and reports exposed secrets in GitHub Pull Requests.

- Engineered a Fan-Out/Fan-In multi-agent workflow in Python with smart sharding for parallel file scanning and optimal LLM context management using OpenAI's GPT-4o.
- Integrated the Model Context Protocol (MCP) for real-time extraction of PR files and automated posting of review comments directly on vulnerable lines of code.
- Implemented context-aware detection to drastically reduce false positives compared to traditional regex-based security scanners.

Snake AI - Neuroevolution & Genetic Algorithm

- Developed a self-learning AI that masters the classic Snake game from scratch using a custom Multi-Layer Perceptron (MLP) Neural Network and a Genetic Algorithm.
- Built entirely in Python and NumPy, engineering the mathematical models without relying on external machine learning libraries.
- Implemented natural selection, crossover, and mutation mechanisms to evolve the population over multiple generations.
- Engineered a raycasting vision system for dynamic environment detection.

EDUCATION

Babeş-Bolyai University (UBB) Cluj-Napoca

Sept 2024-Present

Romania Bachelor Degree in Computer Science Faculty of Mathematics and Computer Science

Colegiul Național "Ștefan cel Mare" Suceava

Graduated: 2024

Romania High School Diploma, Mathematics & Informatics (Intensive Informatics)

KEY SKILLS

- Artificial Intelligence & Machine Learning:** Evolutionary Algorithms, Neural Networks, Neuroevolution, Multi-Agent Systems, Model Context Protocol (MCP).
- Programming Languages:** * Core / OOP: Java, C++, Python, C#.
- Systems & Low-Level:** C, Assembly, Shell (Bash).
- Functional & Logic:** Lisp, Prolog.
- Software Engineering & Architecture:** Object-Oriented Programming (OOP), Data Structures and Algorithms (DSA), Software Architecture, Software Engineering (Design Patterns, SDLC), Version Control (Git).
- Systems, Databases & Networks:** Operating Systems, Database Management Systems (DBMS / SQL), Computer Networks (Cisco Packet Tracer).
- Languages:** Romanian: Native / Bilingual; Italian: Native / Bilingual; English: Professional Working Proficiency
